## **DETAILED ACTION**

## Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-9, drawn to a sensor head classified in for example, Class 310 subclass 313.

Group II, claim(s) 10-13, drawn to a gas sensor apparatus classified in for example, Class 310 subclass 367.

Group III, claim(s) 14-19, drawn to a sensor unit with temperature regulation classified in for example, Class 700 subclass 132.

1. The inventions listed as Groups I, II and III lack unity of invention because even though the inventions of these groups require the technical feature of a three dimensional base body having a curved surface allowing definition of a circular orbital band and an electronic transducer, this technical feature is not a special technical feature as it does not make a contribution over the prior art in view of Tsukahara et al. (Claim 1 of US Published Application 20020014809A1).

Tsukahara et al. teach an elastic surface-wave device comprising a substrate, and a surface acoustic wave generator which is provided on a surface of the substrate and generates surface acoustic waves on the surface, wherein the substrate has a region which is configured by at least a part of a spherical surface in the surface and is circularly continuous; and wherein the elastic surface-wave generator is provided in the surface region of the substrate and generates surface acoustic waves in such a manner that the surface acoustic waves propagate along the surface region of the substrate only in a direction in which the surface region of the substrate is circularly continuous, without being diffused in a direction which crosses the continuous direction. The shared technical feature of Groups I-III above is therefore not a special technical feature as it does not make a contribution over the prior art.

Page 3

The inventions of Groups I-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions are classified in different classes and each have different components and structures characteristic to each a sensor head, gas sensor apparatus and finally a sensor unit respectively.

2. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

- 3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
- 4. A telephone call was made to Erlene Schmidt on 4/24/2009 to request an oral election to the above restriction requirement, but did not result in an election being made.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sally A. Sakelaris whose telephone number is 5712726297. The examiner can normally be reached on Monday-Friday 8-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jill Warden can be reached on 5712721267. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
